WHAT IS ANGULAR?

WHAT IS ANGULAR?

Angular is a JavaScript framework for building single page client application using HTML and TypeScript.

WHAT IS ANGULAR?

Angular is a JavaScript framework for building single page client application using HTML and TypeScript.

?

Once the initial application has loaded into the browser, further interactions only load the additional data needed.

WHAT IS ANGULAR?

Angular is a JavaScript framework for building single page client application using HTML and TypeScript. Angular is primarily written in TypeScript and implements core functionalities as a set of TypeScript libraries that you import in your app.
